# Zipline Express Website — Complete Client Requirements for Developer

## 1. Website Objective

- Design, develop, and launch a **new Zipline Express website**.
- The website must be a **clean, professional, fast, mobile-first MVP**.
- The website should be designed so it can be **expanded and developed further later**.
- The immediate priority is to have the website and booking pathway live **sufficiently ahead of October 5**, the target date for the first scheduled passenger flights.
- The website is **not a rebranding project**.

## 2. Core Website Services

The website must present **two equally important services**:

### A. Scheduled Passenger Service

The website must clearly present:

- **Freeport ⇄ Bimini**
- **Freeport ⇄ Marsh Harbour**
- Flight schedules
- Fares
- Travel information
- Baggage information
- Clear **"Book a Flight"** functionality

### B. Private Charter

The website must clearly present:

- Existing Zipline private charter services
- Existing aircraft
- Destinations
- Aircraft capabilities
- Clear **"Book / Request a Charter"** functionality

## 3. Scheduled Passenger Booking Functionality

- Mornel already has a **dedicated third-party booking platform** for the scheduled passenger operation.
- The website developer **does NOT need to build a booking system**.

- The website developer **does NOT need to assess or manage the booking software**.
- The website developer **does NOT need to build or manage the passenger CRM**.
- The website developer **does NOT need to implement payment processing**.
- The website developer **does NOT need to manage passenger communications**.
- The website simply needs to connect/direct customers from the Scheduled Passenger Service section to the third-party booking platform.
- The booking-platform provider will supply the appropriate **booking link/functionality**.
- The transition from the Zipline website to the booking experience should be **as seamless as reasonably possible**.
- The booking access needs to be live sufficiently ahead of **the given date** so customers can begin booking and the marketing campaign can promote the service.

## 4. Private Charter Booking

- Existing charter booking functionality can be **linked or integrated appropriately** on the charter side.
- Existing charter content, information and components from the current Zipline website should be **reused where appropriate** rather than recreating everything from scratch.

## 5. Design & Visual Direction

- Overall visual direction should be:
    - Predominantly **white**
    - **Navy blue** accents
    - **Gold** accents
- The design should be visually consistent with the **Zipline aircraft**.
- The existing **Zipline logo must remain**.
- The logo may be presented in a **single colour where appropriate**.
- **No rebranding** is required.
- The website should have a professional aviation and travel feel while remaining clean and modern.
- The design should prioritize clarity and ease of navigation rather than unnecessary complexity.

## 6. Website Content Requirements

The website needs to provide clear information for the scheduled passenger service, including:

- Routes
- Schedules
- Fares
- Travel information
- Baggage information
- Booking instructions/pathway

- Passenger-relevant information required to make a booking decision

For the charter section, relevant information from the **existing Zipline website** can be reused, including:

- Existing charter services
- Aircraft information
- Destinations
- Capabilities
- Existing relevant content/components
- Existing charter booking functionality/link

## 7. Technical Requirements

The client specifically requested that the basic technical foundation be done properly from the beginning, including:

- **Google Analytics**
- **Google Search Console**
- Basic **technical SEO**
- Basic **on-page SEO**
- Appropriate **website tracking**
- Good **mobile performance**
- Fast loading/performance
- Mobile-first usability
- Proper connection between the website and third-party booking platform

## 8. Website Performance & User Experience

The website should be:

- Fast
- Mobile-first
- Responsive across devices
- Easy to navigate
- Professional
- Clear and conversion-focused
- Simple for customers to find routes, schedules and fares
- Simple for customers to reach the booking experience
- Built as an MVP without unnecessary complexity
- Structured so additional functionality can be added later

## 9. Website Scope Exclusions — Important for Developer

The following are **specifically NOT part of the website development scope**:

- No CRM development
- No CRM implementation
- No CRM management
- No GoHighLevel/GHL implementation
- No passenger lead-management infrastructure
- No customer-success system
- No payment-processing system
- No payment integration development
- No passenger communication system
- No development of the scheduled passenger booking software
- No assessment/management of the third-party booking system
- No ongoing monthly website/developer retainer as part of the immediate project

## 10. Core Developer Deliverable

The final website should ultimately provide customers with a clear journey:

**Zipline Express Website → Choose Service → Scheduled Passenger / Private Charter → View Relevant Information → Book Flight / Request Charter**

For the scheduled service specifically:

**Scheduled Passenger Service → Route → Schedule/Fare/Travel Information → Book a Flight → Third-Party Booking Platform**

The entire website should support the primary business objective: **getting the new scheduled passenger service ready for customers to discover and book ahead of the launch.**
